

# Let Your Employees Change/Reset Their Own Passwords!

ARKSSPR allows users in your organization to securely and quickly reset or change their Active Directory passwords without needing support from the IT department when they forget their passwords.

With ARKSSPR, you can enhance the security of the passwords your employees can use by implementing Blacklist and Regex templates.

# Eliminate The Need For Technical Support!

With a customized SSPR application for your organization, your employees can securely and easily reset or change their forgotten passwords through a web portal.

ARKSSPR allows users to manage their passwords without IT support, while enhancing security with multi-factor authentication steps (such as security questions and verification emails) to make password management more secure.

**Multi-Factor Authentication (MFA)**

**Time Savings**

**Labor Savings**

**Maximum Security**

**Customized Solution**

**Regulatory Compliance**

A screenshot of the ARKSSPR web portal. The interface includes a header with the ARKSSPR logo, followed by input fields for Username, Password, and Domain. Below these is a Validation Type dropdown menu set to SMS, and a checkbox for Remember Me. At the bottom are three buttons: Login, Password Reset, and Unlock. The footer contains copyright information: All rights reserved by Arksoft, ARKSOFT All Copyrights Reserved © Version: 2.0.65.
