arksoft®

Identity First. Security Always.

PRODUCT INTRODUCTION CATALOG

2025

Company Overview

Founded by senior Microsoft experts in 2017, Arksoft delivers high-value IT consultancy and develops secure, scalable software solutions for institutional needs. With years of experience in Microsoft technologies and deep industry know-how, we have supported over 200 organizations across public and private sectors. We specialize in areas such as identity security, session control, and multi-factor authentication — enabling modern institutions to operate safely and efficiently.

Our expert team is committed to delivering exceptional service, building lasting partnerships, and contributing to digital transformation on a global scale.

Our Mission & Vision

Solving IT Challenges, Creating Real Value.

We are committed to leveraging our technical expertise and industry knowledge to deliver high-impact solutions that effectively address IT challenges, while maintaining a strong focus on customer needs and adding long-term value to our clients' organizations.

Empowering Progress with Trusted IT Solutions.

Our vision is to become the most trusted provider of innovative and reliable IT solutions, recognized for our commitment to excellence, customer satisfaction, and long-term partnerships that empower organizations in an ever-evolving digital world.

Protect Your Digital Assets to Enhance Security

ARK2FA

ARK2FA

ARK2FA is our two-factor authentication (2FA) solution designed to enhance user security across enterprise environments. It supports various integration methods, including Microsoft ADFS and RADIUS, enabling secure access to applications such as Outlook Web Access (OWA), SharePoint, and VPNs.

ARK2FA helps organizations strengthen remote access scenarios by adding an extra layer of authentication through SMS or OTP-based verification.

Solving IT Challenges, Creating Real Value.

SL SessionLimit

SessionLimit enables the management of concurrent user sessions in Active Directory environments. It supports multi-factor authentication (MFA), allows for the definition of session policies, and provides detailed reporting capabilities. Users can view and terminate their active sessions, as well as monitor connection durations.

Full Control Over Your Shared Computers and Accounts

SessionAudit

SessionAudit enhances traceability by identifying users on shared or generic accounts and devices. Through integration with identity management systems, it determines who logged in and provides administrators with detailed session reports.

Secure Email Access for Mobile Devices

Device2Mail is our mobile email security solution developed for organizations using on-premises Exchange services. It adds an additional authentication layer to the ActiveSync protocol, working in tandem with Active Directory and Exchange systems to securely manage data traffic between mobile devices and the Exchange server.

Add a Touch of Professionalism to Your Emails!

arksoft®

NextClaimer

NextClaimer is our corporate email signature management solution that integrates with Microsoft Exchange Server to deliver consistent and professional signatures through a centralized interface. It automatically generates signatures using user information from Active Directory. Signatures can be assigned based on users, groups, or OUs, and different policies can be defined for internal and external email communication.

We Are An Email Security Solution Brand Worldwide.

arksoft®

Dmarc Analyze

DmarcAnalyze is a software solution designed to maximize email security by accepting and processing messages only from authorized email servers. It enables users to securely manage and configure their own email domains.
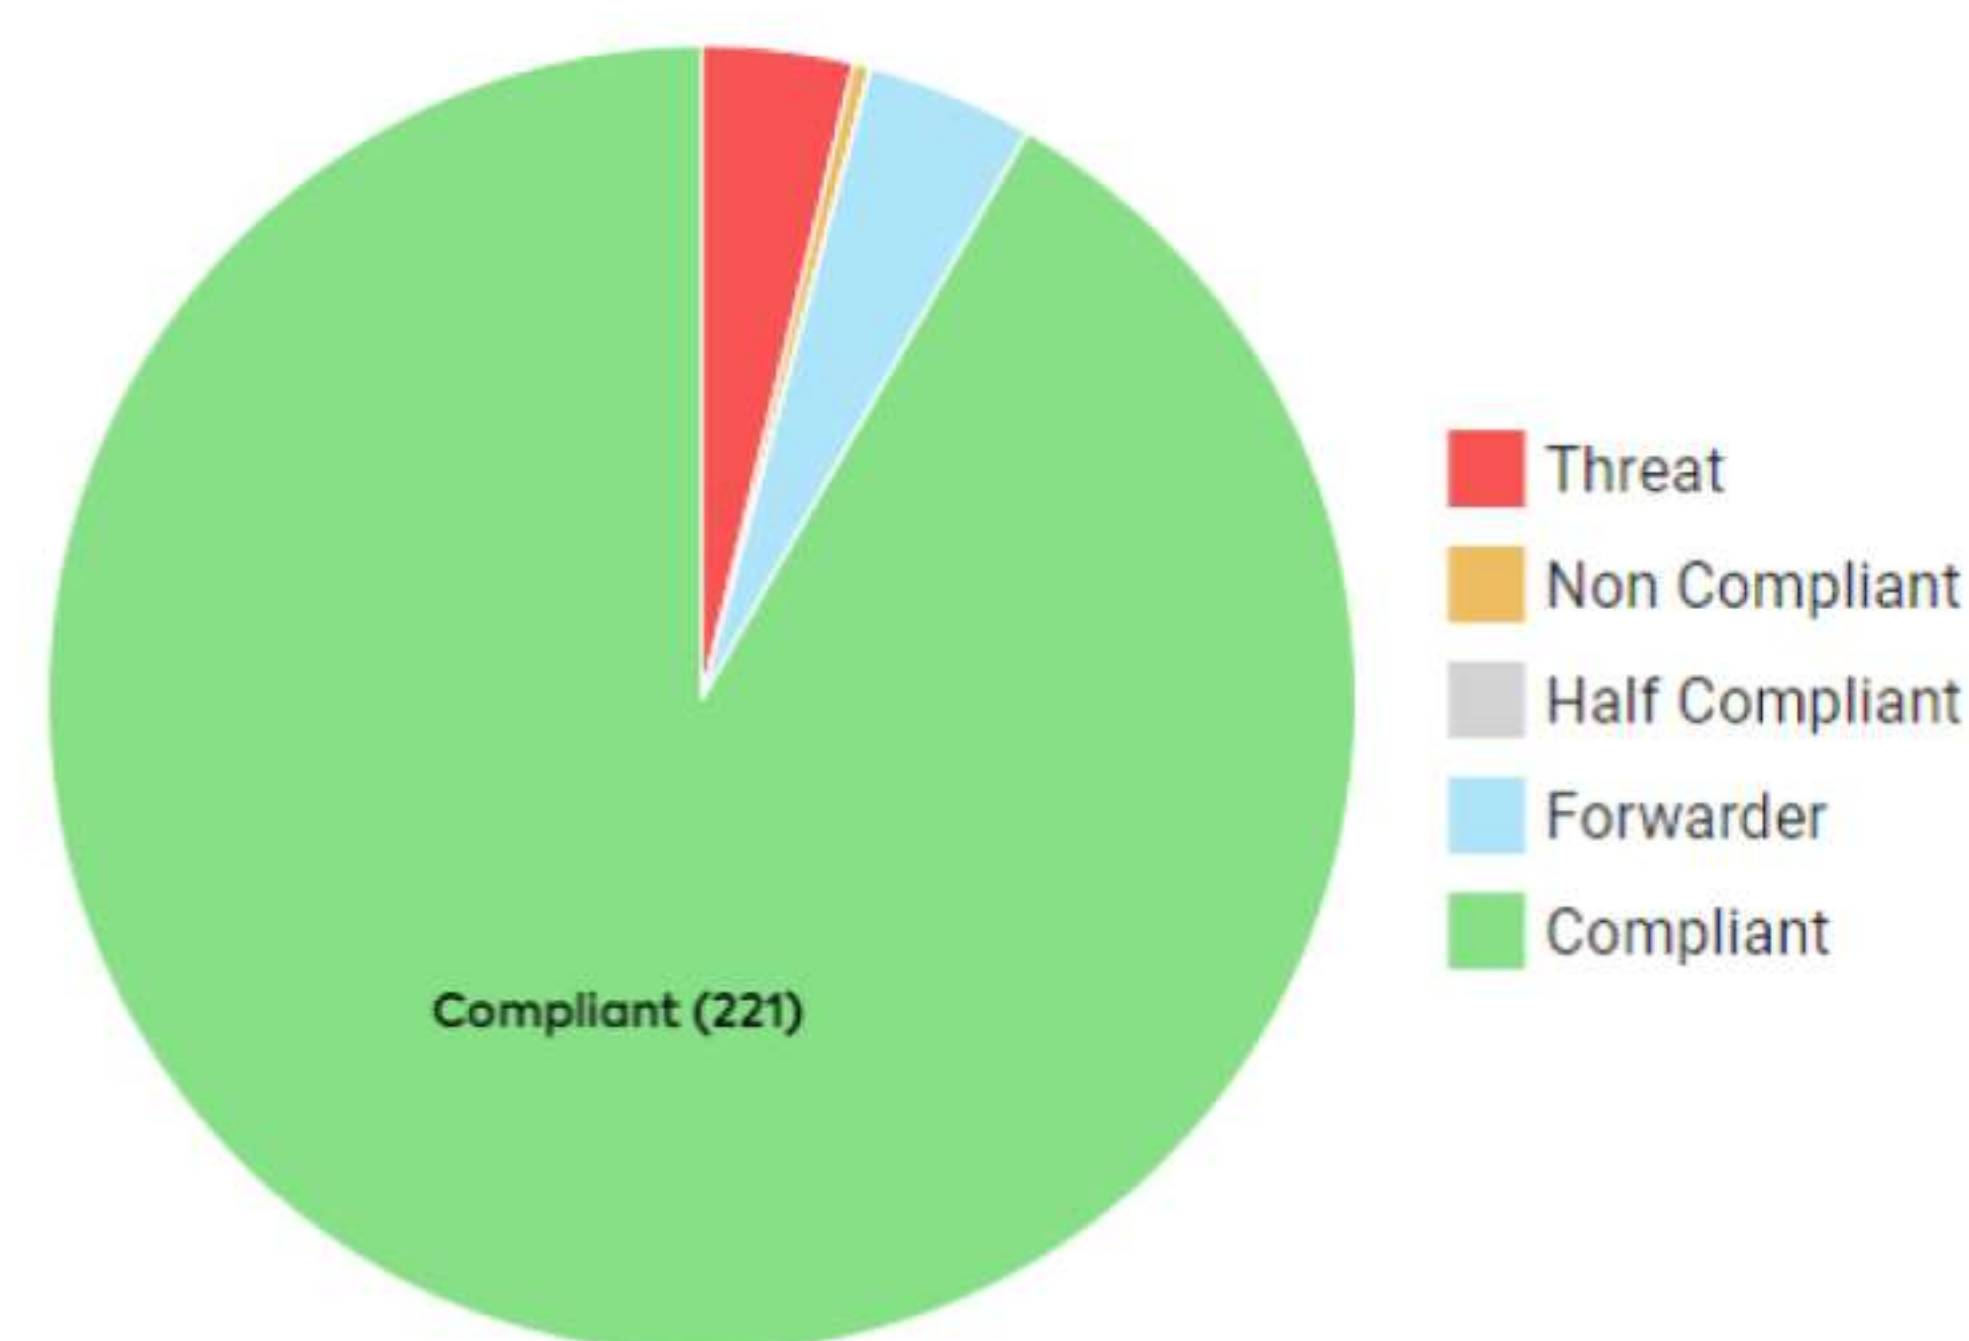

By leveraging DMARC, SPF, and DKIM protocols, DmarcAnalyze analyzes email traffic and helps ensure secure, authenticated communication. The platform processes data exclusively from trusted and verified sources, giving organizations full control over domain-level email activity.
