

Let Your Employees Change/Reset Their Own Passwords!

ARKSSPR allows users in your organization to securely and quickly reset or change their Active Directory passwords without needing support from the IT department when they forget their passwords.

With ARKSSPR, you can enhance the security of the passwords your employees can use by implementing Blacklist and Regex templates.

Discover ARKSSPR

Eliminate The Need For IT Support!

With a customized SSPR application for your organization, your employees can securely and easily reset or change their forgotten passwords through a web portal.

ARKSSPR allows users to manage their passwords without IT support, while enhancing security with multi-factor authentication steps (such as security questions and verification emails) to make password management more secure.
